Reflektor/Reflektor II Reflektor and Reflektor II are especially suited to commercial interiors with high open ceilings. Luminaires utilize ceramic metal halide as well as compact fluorescent lamp technology incorporating integral electronic ballasts. Both styles may be suspended by twin aircraft cables or tubes which can be supplied to meet individual specifications. The Reflektor has an optional uplight hole provides indirect ceiling illumination. Reflektor II is similar in concept to Reflektor. It is smaller in scale but still provides high levels of illumination for high open spaces.

Both fixture styles are suitable applications include foyers, public halls, airport terminals and atria.
